RE: ML 51303-MP; DOGM Permit #M0390013

Dear Mr. Haas:

I recently drove by your stone quarry that is located upon state trust lands near Fayette, Utah. I note that the manufacturing building remains standing and that there is still a considerable amount of regrading work to be performed, not to mention the requirement to reseed the disturbed areas.

I am very concerned that more reclamation progress has not been made at the site, in view of the fact that your current permit (Mineral Materials Permit ML 51303-MP) to enter upon the lands expires at the end of April 2009. I want to personally encourage you to make the complete reclamation of this quarry site a priority during the remaining few months of good weather, in 2008.

Please be aware that the Trust Lands Administration will not hesitate to seek forfeiture of your reclamation bond with the Division of Oil, Gas & Mining, unless the required reclamation work is completed by the end of April, 2009.

Sincerely,

John T. Blake  
Trust Land Specialist
